INTERNSHIP CONFIRMATION LETTER

Date: 28/02/2026

To whom it may concern,

This letter confirms that Mr. Supun Nimantha completed an internship with FoodME Ltd (trading as Favour) commencing on 11 November 2025.

Supun was appointed as a Full Stack Engineer Intern, working 40 hours per week, with a minimum total of 400 hours, over a period of 10 to 14 weeks, as part of his programme at Yoobee Colleges.

The internship was unpaid, and no salary, wages, or financial compensation were provided during this period.

During his internship, Supun was responsible for full stack development across both frontend and backend systems. On the frontend, he contributed to the development and maintenance of our React Native mobile application, implementing responsive UI components, integrating Redux Toolkit for state management, and connecting frontend features to backend APIs to support recipe browsing, meal planning, and user functionality across iOS and Android platforms.

On the backend, Supun worked with Django and Python to build and maintain RESTful APIs supporting core platform features. He contributed to database schema design and optimisation in MySQL, implemented authentication and security measures, and supported scalable backend operations using AWS services including Lambda and API Gateway. He also worked on integrating new supermarkets into the platform, improving data synchronisation between services, and contributing to AI feature integration within our workflow.

Supun demonstrated strong technical capability across the full development lifecycle, delivering features end-to-end from user interface implementation through to backend logic and database integration. He participated actively in code reviews,

agile sprint processes, and daily standups, and worked closely with the CTO to translate feature requirements into reliable technical solutions.

Beyond his technical competence, Supun stood out for his professionalism and work ethic. He was reliable, disciplined, and consistent in meeting his commitments. He approached challenges with persistence and maturity, taking ownership of problems and working through complexity without requiring excessive supervision.

Supun collaborated effectively with both engineering and data team members, communicated clearly, and remained open to feedback. He handled ambiguity calmly and maintained steady progress even when working across multiple layers of the technology stack. His balanced combination of independence and teamwork made him a dependable and valued member of the team.

Supun would be a strong asset to any organisation seeking a capable full stack engineer with both technical depth and strong professional character. I would not hesitate to recommend him.

Please feel free to contact me should you require any further information.
